Education

York University Expected Graduation Date: **December 2027**
BEng in Software Engineering (Specialization in Big Data) Toronto, Ontario

Coursework

- Intro and Advanced OOP
- Data Structures
- Database Systems
- Software Design
- Software Development Project
- Embedded Systems

Skills

Languages: Python, JavaScript, TypeScript, Java, C, SQL, HTML, CSS
AI / ML: TensorFlow, PyTorch, Scikit-Learn, Keras, OpenCV, XGBoost, Pandas, NumPy, OpenAI, MCP
Tools / Frameworks: Git, GitHub, React, FastAPI, Node.js, Docker, Amazon Web Services (AWS), Google Cloud Platform (GCP), Azure
Databases: PostgreSQL, SQLite, Firebase, S3, MongoDB, Dynamo DB

Experience

Software Developer Co-op Sep 2026 – Dec 2026
D2L (Brightspace) Kitchener, Ontario

- Developed and enhanced custom applications, features, and integrations for the **Brightspace learning platform** using **JavaScript**, **Node.js**, **Python**, leveraging **API's**, **Terraform**, **AWS**, **DynamoDB** and **SQL** for scalable backend services.
- Built **Python** automation scripts and custom algorithms to migrate Brightspace's **analytics** from **Domo** to **Amazon QuickSight**, automating dataset and visualization conversions and reducing migration time by **88%** compared to manual migration.
- Developing an **AI-powered** e-learning dashboard for **Humber Polytechnic**, integrating student progress tracking and **AI-driven** functionality to provide students personalized insights into their academic progress, increasing student engagement by **30%**

Software Developer Co-op Sep 2025 – Apr 2026
Royal Bank of Canada Toronto, Ontario

- Built upon and maintained RBC's core design system with **React, Angular** and **TypeScript**, delivering bug fixes, enhancements, deployments, testing, documentation, and developer support for internal teams to ensure design system consistency and usability.
- Built RBC's design system **AI Agent** using **prompt engineering**, **LLM's**, and **MCP** servers, automating component generation and **Angular** to **React** migrations while reducing upgrade time by **50%**, migration effort by **90%** and meeting Safe AI standards
- Developed backend services for digital asset management using **Node.js**, **Docker**, and **MongoDB**, improving asset retrieval by almost **40%** while supporting automated deployments with **Jenkins** and **Red Hat OpenShift** and testing with **Jest**.

AI/ML Engineer Intern April 2025 – June 2025
CAPRiser Group Remote

- Built real-time financial **data pipelines** and trained stock-prediction **ML models** using **Python**, **TensorFlow**, **Scikit-learn** and **XGBoost**, achieving **15%** improvements in profitable stock predictions through **cross-validation**.
- Deployed **ML models** on **AWS** with **PostgreSQL** storage and implemented monitoring pipelines to ensure scalable, reliable performance in production, validating accuracy with **A/B testing** and **performance metrics**.
- Represented CAPRiser at **Consensus Toronto 2025**, showcasing the company's AI-powered financial platform to institutional investors and Web3 leaders at the **world's largest blockchain conference** (**20,000+** attendees from **100+** countries)

Projects

Reddish Trends – Social Media Powered Stock Market Analyzer | Website | GitHub Repo Website | GitHub Repo Backend
Tech Stack: *TypeScript, CSS, Next.js, React, Python, Flask, Pandas, Firebase, OpenAI GPT-4o-mini, yfinance API, Reddit API*

- Developed a stock prediction platform integrating Reddit **sentiment analysis** and financial indicators, delivering **10-20%** relative performance gains across multiple tickers and market conditions.
- Built a multi-source **data pipeline** and **AI** analytics engine using OpenAI **LLMs**, **Python**, **Pandas**, and **Flask**, enhancing sentiment-price correlation reliability by **25%**.
- Designed an interactive dashboard for real-time stock trends, **AI**-driven trade signals, and a customizable market analysis tool.

Mood Atlas – AI-Powered Personalized Place Finder | Website | GitHub Repo
Tech Stack: *JavaScript, CSS, Next.js, React, Python, Flask, SQL, GCP, OpenAI GPT-4o-mini*

- Developed an **AI**-driven place finder leveraging **Google Maps API** for mood-based destination recommendations.
- Engineered an **AI**-powered backend with **Python**, **Flask**, and OpenAI **LLMs**, integrating a custom algorithmic engine that enhanced place-fetching accuracy by **50%**, number of places fetched by **500%**, and boosted recommendation accuracy by **40%**.
- Implemented a responsive **Next.js** dashboard with **React** components for a seamless and engaging user experience.
